

FRONT END WEB DEVELOPER

PROFILE

I am a front-end web developer learning more about web development and aspiring to become a full-stack developer. Although I don't have professional experience in a company environment, I have independently created personal projects using AI and analytical skills from Google to showcase my abilities in my portfolio. I am prepared to invest time and make extra efforts to learn the necessary technologies and skills that will enable me to contribute effectively to a company and continue growing as a developer.

WORK EXPERIENCE

FRESHER

PERSONAL PROJECTS

MOVIE WEBSITE [LIVE LINK](#)

Api used : TMDB

- Designed and developed a movie website featuring genre-based browsing.
- Integrated a search functionality to enable users to find movies quickly.
- Enhanced user experience by organizing movies into categories and providing detailed information on each title.
- Focused on creating a seamless and intuitive interface for movie exploration.

E-COMMERCE SITE [LIVE LINK](#)

Api used : DUMMYJSON

- Developed a full-featured e-commerce website with 100 products.
- Implemented product filtering, a search functionality, and an add-to-cart option to enhance user experience.
- Optimized the shopping interface for easy navigation and quick access to desired items.
- Focused on user-friendly design and seamless interaction to improve conversion rates.

EXPANDING CARDS [LIVE LINK](#)

- Developed an interactive image gallery where users can click thumbnails to view larger, expanded versions.
- Made with Vanilla Javascript
